

FOR IMMEDIATE RELEASE

Michigan Auto Title Service Integrates with Recovery Database Network to Provide Financial Institutions Ease in Processing Repossessed Vehicle Title Requests

Combining these two market leaders connects RDN Global Client Lenders with Michigan Auto Title Service and allows for a fast, new, and more efficient way for financial institutions to submit title requests over the web, without having to leave the RDN environment.

Shelby Township, MI – January 8, 2007 – Michigan Auto Title Service, Inc. (“M.A.T.S.”) and Recovery Database Network (“RDN”), today announced that they have executed a software integration agreement and have already begun the process of integrating their software products in a manner that will allow their mutual customers to seamlessly process title requests.

The M.A.T.S. Request Pro Software Version 1.0 was launched in May 2007 and it is a hosted web-based application developed to give M.A.T.S.’ customers the ability to login and view title requests submitted via the website, check the status of those requests, send comments or update submitted requests. M.A.T.S. worked with XFX Studio to develop a custom software application intended to revolutionize the industry, by streamlining how M.A.T.S.’ customers submit requests, while improving the efficiency of processing those requests, which in turn means greater quantities with faster turnaround.

“M.A.T.S. has a team of highly dedicated men and women who have been assisting many high volume financial institutions, auto dealerships and auctions with their title processing needs since 1999. The title process relies on the ability to effectively communicate information between lending institutions and the department of motor vehicles in all 50 states, and M.A.T.S. effectively bridges that gap. With the use of cutting edge technology, M.A.T.S. has established the ability to process all title requests the same day they are received which is no small task when you process over 15,000 titles per month.” said Todd Wysocki, Vice President of M.A.T.S.

“After the statutory redemption period, every day that passes where a lender cannot sell a repossessed vehicle, because they are waiting on a title, costs lending institutions money. Our integration with M.A.T.S. will provide lenders with an opportunity to shave days, if not weeks, off of the titling process which will translate into a huge savings for large volume financial institutions.” said Todd Hodnett, President of Recovery Database Network. “The key to this is that it allows a Lender to manage recovery of the vehicle and subsequent repossession titling requests all in one software environment, which streamlines the entire recovery and remarketing process thereby creating efficiencies for our mutual lending institution clients.”

About Michigan Auto Title Service, Inc.

M.A.T.S., Inc. was formed in 1999 to provide financial institutions, auto dealerships, and auctions with a cost effective and quick turn around on title requests. Recognizing the absence of a reliable, stable and properly engineered software solution for processing title requests, M.A.T.S. embarked on the development of the Request Pro Software and launched it in May 2007. Currently averaging over 15,000 titles per month collectively in all 50 states, M.A.T.S. is the largest repossession title processing company in Michigan, if not the entire United States. About Recovery Database Network

The Recovery Database Network (RDN) was formed to facilitate business-to-business electronic commerce ("E-Commerce") between lending institutions and all of the members of the recovery and remarketing value chain. RDN built and launched a two-way E- Commerce network which allows lending institutions and recovery related service providers to be linked through the standard protocols of the Internet.

RDN's mission is to improve the way lending institutions and recovery and remarketing related service providers conduct business using the Internet as an enabling tool. With more than 7,000 individual users logging into our system on a daily basis, and on average more than 220,000 new recovery related orders processed every 31 days, we believe we are well on our way to achieving our company mission. For more information, call 817.204.0298 Ext. 2, email thodnett@recoverydatabase.net , or visit the RDN web site at www.recoverydatabase.net .
